

TACTICAL FLOTATION SYSTEM

The Tactical Flotation System is designed to give military personnel significant underarm flotation support.

It is designed to be fitted onto a waistbelt or MOLLE platform and provided in an individual pouch, which offers either automatic or manual inflation system.

The inflatable bladder is manufactured from tough ISO12402-7 approved PU coated polyamide using high visibility yellow or black textile. The outer cover is available in texturised nylon (minimum 1000D fabric).

Key features

- Auto or manual CO2 inflation (c/w blanking cap for manual only)
- The pair provide 375N buoyancy
- MOLLE/belt attachment points
